# For the Panelists – CIO Roles

---

- What are/have been your biggest challenges?
  - Today?
  - 2017?
  - How far out do you (or can you) plan?
- How do you bridge the gap between internal stakeholders & facilitate change?

# Budgets & Spending

---

## 2017 IT Budget:

- According to Forrester: InformationWeek (11/07/16)
  - “...declining economic prospects and increasing uncertainties will result in a 2.9% increase in spending in 2017.”
- Via TEKsystems’ research of 700 North American IT Leaders : InformationWeek (12/12/16)
  - 49% expect their IT budget to increase next year while 39% expect IT spending to stay the same.
- According to 451 Research: InformationWeek (11/17/16)
  - One-Third (1/3<sup>rd</sup>) Goes to Cloud, Hosting Services
  - Where are IT budgets being spent?:
    - » 42% on application services
    - » 30% on **infrastructure spending**
    - » 14% on managed services
    - » 9% on security services
    - » 5% on professional services -- specifically for cloud enablement

# Projected Spending Areas

Via TEKsystems research of 700 North American IT Leaders – InformationWeek, 12/12/16

## Technology Areas With the Biggest Impact

Impact areas and spending continue to run parallel

### SECURITY

### CLOUD

### BI / BIG DATA

■ Top 3 areas IT leaders expect to increase **spending**

■ Top 3 trends and technologies expected to have the **biggest impact** on the organization

# For the Panelists – IT Spending

---

- How do you see IT budgets/spending in 2017?
  - Decreasing, Flat or Increasing?
  - Will budgets stay annual or become quarterly?
  - Proactive vs. Reactionary

# Cloud Will Go Away?

---

**Peter Levine, general partner at Andreessen Horowitz**

Gartner, Las Vegas last week:

Data Center Knowledge, 12/15/16

- ... some in the Silicon Valley venture capital community are already thinking about a future when cloud will start losing its relevance.
- “In the not-too-distant future cloud computing is going to go away,”
- As computing capacity at edge nodes grows, demand for large centralized pools of processing resources in massive data centers will shrink, representing a pendulum swing not unlike the shift from mainframes to distributed client systems in the past.
- “Computing goes from centralized to distributed to centralized. That’s been the ebb and flow of computing since the beginning of computing,” Levine said.
- “Guess what, cloud is the centralized model”

# For the Panelists - Cloud

---

- Is the cloud going to take over everything?
  - “Move To”, “Adoption of” or “Hybrid”
- Barriers to Entry?
  - Security Considerations?
- Scale, Scope & when to keep in-house?

# Staffing

Via TEKsystems research of 700 North American IT Leaders – InformationWeek, 12/12/16

## Hiring Expectations

### Staffing and managed services to increase

\*Statement of work

\*More than 700 IT leaders were polled in Oct. 2016

# For the Panelists - Staffing

---

- Where do you see growth?
- Challenges?
- Skill Sets & Retention?

# Five (5) Trends Shaping 2016

---

1. Cloud – more complicated than it looks
2. Architecture – four (4) emerging archetypes
3. Language – IT / DCIM Rosetta Stone
4. CSR – Beyond PUE and Green
5. Edge – Compute / Storage ‘Last Mile’

# For the Panelists

---

- What is the best way to communicate with senior IT leadership?
- What are some of the new buzzwords we need to know?
  - Blockchain, Shadow IT, Instances...
- What's next?

# For the Audience

# Questions
